

UNIVERSITY OF MARYLAND REHABILITATION & ORTHOPAEDIC INSTITUTE

Thank you for supporting our *6th Annual Adapted Sports Festival* on Saturday, September 6, 2014. Despite the hot weather, our participants had a wonderful time. We could not have done this without your support, and we truly value the partnership we enjoy with your organization. In all, we hosted 125 participants, 125 volunteers and 30 staff members at the festival. The goal of our adapted sports program is to improve the level of independence and quality of life for those who have experienced a traumatic event or illness. Your willingness to showcase your organization and unite with us toward this goal allowed this year's festival to become a reality.

We are stronger because of you. Working together, we *can* make a difference in our community.

We look forward to partnering with you again!

University of Maryland Rehabilitation & Orthopaedic Institute is Maryland's first orthopaedic specialty hospital, serving the citizens of Maryland for over 117 years and offering the most advanced care in physical rehabilitation and orthopaedic surgery for adults and children. The hospital began as The James Lawrence Kernan Hospital in 1895 to treat the crippled children of Maryland and has evolved into the University of Maryland Rehabilitation & Orthopaedic Institute a leader in the treatment of musculoskeletal disease, joint replacement, sports injury and dental surgery.

The highly specialized staff provides an interdisciplinary continuum of care, including surgery and rehabilitation, in a restorative environment. The University of Maryland Rehabilitation & Orthopaedic Institute is an integral component of the University of Maryland Medical System. Our patients also benefit from our strong partnership with the University of Maryland Medical School.

With 144 beds, University of Maryland Rehabilitation & Orthopaedic Institute is the largest inpatient rehabilitation hospital and provider of rehabilitation services in the state. Patients make the transition to rehabilitation after re-
